## Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Claims 1-28 are allowable over the prior of record because none of the prior art whether taken singularly or in combination to disclose, suggest or make obvious the combination or method as claimed, such require using an adaptive observer in such a way that a product of the estimated value of an amount of drawn air of the cylinder is made equal to a value of an amount of air having passed through the throttle and multiplying the estimated value of an amount of drawn air of the cylinder by the value of identification parameter to obtain a final estimated value of an amount of drawn air of the cylinder (claims 1, 8, 15, 22); using an adaptive observer in such a way that a value obtained by subtracting a product of the estimated value of an amount of recycled exhausted gas and a value of the second identification parameter, and from a product of the estimated value of an amount of drawn air of the cylinder is made equal to a value of an amount of air having passed through the throttle, and from a product of the estimated value of an amount of drawn air of the cylinder to obtain a final estimated value of an amount of drawn air of the cylinder to obtain a final estimated value of an amount of drawn air of the cylinder to obtain a final estimated value of an amount of drawn air of the cylinder (claims 3, 5, 10, 12, 17, 19, 24, 26).

Kotwicki et al (US 6,321,732) discloses an exhaust gas recirculation measurement system and a system for estimating engine flow, including exhaust gas flow from an manifold of an internal combustion engine to intake manifold (Brief summery of the invention). Jankovic et al (US 6,708,102) discloses a system and method for predicting cylinder air charge in an internal combustion engine; the pressure

in an intake manifold is calculated and an estimated position for a throttle plate, and a rate change of the pressure in the intake manifold is estimated responsive to the measured intake manifold pressure and the estimated throttle plate position.

These references of Kotwicki et al and Jankovic et al do not disclose the claimed combination as recited in the current application as set forth above.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
